SOFTWARE DEVELOPMENT EXPERIENCE

Application Developer, Ascedia, Milwaukee, WI   2023-present
- Develop and maintain back-end solutions using C#.NET for internal projects and external clients
- Collaborate with project managers, and front-end developers and back-end developers to understand requirements and solve problems as a team
- Navigate a variety of project codebases using .NET technologies including MVC architecture, Entity Framework, SSMS, and Razor
- Understand project requirements from an external user perspective and translate them into technical solutions
- Apply Object Oriented Programming knowledge and problem-solving skills to develop programming solutions, and debug and test programming projects

Software Engineer, Best Version Media, Brookfield, WI   2021-2023
- Serve as full stack developer working on large back office application using PHP (backend language), Symfony (PHP framework), MySQL, and ExtJS (JavaScript front end framework)
- Develop UI components and connect to backend data using JavaScript framework
- Troubleshoot technical support issues and communicate with end users in non-technical terms
- Review, understand, and adapt complex code patterns and SQL queries
- Analyze and expand on large legacy codebase, regularly applying consistent code style and DRY principles
- Use analytical skills to understand project scope and outcomes, provide detailed updates to direct supervisor and project managers regarding project progress

C#.NET Apprentice, The Software Guild, Louisville, KY   2020-2021
- The Software Guild is an intensive apprenticeship program that produces .NET / C# full-stack software developers
- Designed and developed a .NET Web application that allowed Car Dealership Administrators update their Inventory information, using EF to talk with the Database
- Designed applications using an MVC architecture that promotes a clear separation of presentation, business logic and data access tiers
- Developed UI Screens in ASP.NET with MVC (View) Pattern with C#
- Used Mock Repository Unit Testing to test methods used with EF for when Database was referenced
- Applied knowledge of object oriented programming, software design principles (MVC), dependency injection, and unit testing to develop/test a console application for fictional flooring company that reads/writes from file system

EDUCATION

C# .NET Apprenticeship Program, The Software Guild, Louisville, KY
